

Individual Write Up (QIQIN ZHAO- ROYCEDAVISON)

I contribute to 45%. I wrote the team write up. I implemented login/logout functionality. My idea is simple only allow login user to use our website. I implemented register functionality, I wrote up form.py and designed a new form for the “register”. This register is not finished yet, I may add other required information such as phone number, address, and etc. My teammate Dong FenFang also implemented those two functions, I used some of her ideas. I implemented change_password/ reset_password, and wrote all html and properly linked them. I also add profile and edit profile functionality into our web application.
